A state-of-the-art resource for forensic scientists, medico-legal practitioners and advanced level undergraduates taking relevant courses in the subject.

This book serves as a comprehensive, international handbook of forensic medicine. Taking an holistic approach, the book moves beyond a focus on forensic pathology to include clinical forensic medicine and forensic toxicology. All aspects of forensic medicine are covered to meet the specialist needs of daily casework. Aspects of routine analysis and quality control are addressed in each chapter. The book presents coverage of the latest developments in forensic molecular biology, forensic toxicology, molecular pathology and immunohistochemistry.

A must-have reference for every specialist in the field, this book is set to become the benchmark for the international forensic medical community.

Handbook of Forensic Medicine provides basic principles and practical information encompassing the complete topic of forensic medicine, from forensic pathology over clinical forensic medicine, traffic medicine, toxicology to identification and medical law.

Special emphasis is given to quality aspects and quality control in preparing reports, as well as didactic and practical aspects to solve cases from daily routine casework.

- Gives an in-depth, international approach to forensic medicine
- Provides a comprehensive overview of all aspects of forensic medicine, from forensic pathology, toxicology through to haemogenetics and medical law
- Includes case studies, check lists and information boxes
- Emphasises the links between diverse sub-disciplines
- Considers all aspects of quality control and best practice
- Illustrated in full colour throughout

TABLE OF CONTENTS

1. Duties of forensic medicine in modern societies
   1.1 History
   1.2 Duties
   1.3 Forensic Medicine and human rights
   1.4 International guidelines (assessment of the validity, reliability and implementation in daily practice)

2. Medical aspects of death
   2.1 Nature and definition of death
   2.2 Certification of death – external post mortem examination
   2.3 Postmortem changes and time since death
   2.4 Cremation
   2.5 Autopsy
   2.7 Transplantation
   2.8 Identification/osteology
   2.9 Mass disaster victim identification (DVI)

3. Traumatology and violent death
   3.1 Legal aspects
   3.2 Traumatology and Criminology
   3.3 Some preliminary remarks concerning biomechanical principles
   3.4 Sequelae of traumatic injuries and causes of death
   3.5 Vital reactions
   3.6 Blunt force injury
   3.7 Forensic ballistics: injuries from gunshots, explosives and arrows
   3.8 Asphyxiation
   3.9 Injuries due to heat
   3.10 Injuries due to cold
   3.11 Electrocution
   3.12 Starvation and Neglect
   3.13 Infanticide
   3.14 Abortion
   3.15 Autoerotic death
   3.16 Death in abnormal position – physical restraint
   3.17 Sexual homicide
   3.18 Medical malpractice
   3.19 Workplace and occupational accidents
   3.20 Special issues regarding expert evidence in violent death

4. Sudden and unexpected death from natural causes
   4.1 Natural causes of sudden death
   4.2 Postmortem Biochemistry as an aid in determining the cause of death
   4.3 Children / SIDS / SUDI

5. Clinical forensic medicine
   5.1 Sexual abuse
   5.2 Non sexual assaults
   5.3 Elder abuse
   5.4 Self mutilation
   5.5 Age estimation in living individuals

6. Forensic psychiatry

7. Toxicology
   7.1 Legal aspects
   7.2 Epidemiology and Adverse Drug Reactions
   7.3 Suspicion of poisoning

7.4 Toxicological analysis (screening and confirmation)
7.5 Issues affecting interpretation: Stability and artefacts
7.6 Toxicokinetics/Toxicogenetics
7.7 Toxicology of Specific Substances

8. Traffic Medicine
   8.1 Ability to drive and driving fitness (includes issues with age)
   8.2 Effects of cardiovascular disease (includes sudden death at wheel due to heart attack)
   8.3 Effects of vision and visual fields
   8.4 Epilepsy and driving
   8.5 Effects of diabetes
   8.6 Epidemiology and causal factors
   8.7 Effects of Alcohol
   8.8 Effects of illegal drugs
   8.9 Effects of other drugs
   8.10 Toxicological Markers of Chronic Alcohol Abuse
   8.11 Traffic accidents

9. Identification
   9.1 Forensic DNA-analysis
   9.2 Forensic Osteology
   9.3 Odontology

10. The doctor and the law

11. Insurance medicine
